

Farmers Quality Testing Laboratory

Soil & Crop Quality Analysis Report (Sample)

Farmer Name	Sunil Deshmukh
Farmer ID	FQT-10999
Village	Malegaon
District	Nashik
Sample ID	S-9500
Sample Collection Date	01-Feb-2026
Report Date	05-Feb-2026

Test Results

Parameter	Result	Unit	Normal Range	Remark
pH Value	8.9	-	6.0 – 7.5	Highly Alkaline
Nitrogen (N)	110	kg/ha	250 – 300	Critically Low
Phosphorus (P)	45	kg/ha	15 – 25	Excessive
Potassium (K)	90	kg/ha	120 – 180	Deficient
Organic Carbon	0.25	%	0.5 – 0.75	Very Poor

Recommendations

- **Urgent Soil Amendment:** Apply gypsum immediately to treat high alkalinity and improve soil structure.
- **Fertilization Strategy:** Significant nitrogen and potassium supplementation is required to address critical deficiencies.
- **Organic Matter:** Drastically increase the use of well-decomposed farmyard manure to combat the very poor organic carbon levels.
- **Crop Protection:** Monitor for signs of rot or over-ripening caused by extreme nutrient stress and poor soil health.
- **Mandatory Retest:** Perform a follow-up soil analysis within 30 days to monitor correction.
